## **SIGN THE PETITION TO END FRACKING!**

## We, the undersigned, urge you to protect British Columbians from climate disasters, set a deadline to end fracking in BC and invest in a just transition for workers and communities.

Fracking for methane gas in northeastern BC produces a fifth of the province's climate pollution. That total will rise if new liquefied natural gas (LNG) plants are built to export the fossil fuel to Asia. It is an extremely potent greenhouse gas that must stay in the ground if the world is to limit global warming to "safe" levels.

Climate disasters are already wiping entire communities off the map. In 2021 alone, a never before seen heat wave killed nearly 600 British Columbians, the town of Lytton burned to the ground after smashing temperature records and unprecedented rains swamped a huge swath of rural Abbotsford. Burning fossil fuels puts our families and communities at risk.

We, the undersigned, call on the provincial government to end fracking in British Columbia. Issue no new permits for gas wells. Reject proposed LNG plants under review. Phase out existing gas production and develop a plan with workers and communities for the future of northeastern BC.

With your signature you're joining the movement to end fracking in BC! We'll follow up via email within a week with more ways to get involved. You can unsubscribe at any time.
